ALBER ASHRAF

Full-Stack .NET Developer

Cairo, Egypt • +20 122 834 2430 • **alber.ashraf.w@gmail.com** • **alber-ashraf.github.io** • **GitHub** • **LinkedIn** • Military: Completed

PROFESSIONAL SUMMARY

Software Engineer and Full-Stack .NET Developer (GPA: 3.79, Graduation Project: A+) with extensive experience across the Microsoft .NET ecosystem (.NET 8/9, ASP.NET Core Web API, EF Core, Dapper) and modern web architectures (Angular 20/21, Angular Signals, SSR). Proven record at Athhan Solutions modernizing enterprise ERP systems, refactoring complex SQL Server stored procedures to optimize critical query execution, and delivering full-stack features across database schemas and responsive UIs. Experienced freelance systems engineer designing educational and e-commerce platforms with CQRS, MediatR, Redis caching, Hangfire, Quartz.NET, and S3-compatible cloud storage.

TECHNICAL SKILLS

Backend & .NET: C# (.NET 8 / 9), ASP.NET Core, RESTful Web APIs, Minimal APIs, ASP.NET Core MVC, Entity Framework Core 8/9, Dapper Micro-ORM, LINQ, Async/Await

Architecture & Patterns: Clean Architecture, Domain-Driven Design (DDD), CQRS, MediatR, Repository & Unit of Work, Result Pattern, Specification Pattern, Dependency Injection

Frontend & UI: Angular (20 / 21), Angular Signals, Standalone Components, SSR, RxJS, Blazor WebAssembly, TypeScript, JavaScript, Tailwind CSS v4, Bootstrap 5.3, HTML5/CSS3

Databases & Cloud/DevOps: SQL Server (T-SQL, Stored Procedures, Index Tuning), PostgreSQL, Redis, AWS S3, Backblaze B2, Cloudflare R2, Docker, Docker Compose, Git, GitHub Actions CI, xUnit, NetArchTest

Security & Identity: ASP.NET Core Identity, JWT Bearer Auth, Refresh Token Family Rotation, PBKDF2 Hashing, OAuth2 / Social Logins, OWASP Security Hardening, BOLA/IDOR Prevention, Stripe Payments

WORK EXPERIENCE

Full-Stack .NET Developer | Athhan Solutions — **Nov 2025 – Oct 2026 | Cairo, Egypt**

Core Stack: .NET Framework, ASP.NET Web Forms, C#, SQL Server, T-SQL Stored Procedures, ADO.NET, JavaScript, HTML5/CSS3

- Refactored complex enterprise SQL Server stored procedures, indexes, and execution plans under ERP transactional workloads, optimizing critical query performance and reducing database lock contention.
- Engineered and maintained full-stack enterprise ERP modules using .NET Framework and ASP.NET Web Forms; built and optimized SQL queries, database schema migrations, and responsive, role-based UI workflows.
- Engineered robust backend integration endpoints and data synchronization pipelines, enforcing strict input validation, structured logging with correlation IDs, and transaction rollback integrity.

Freelance .NET Software Engineer & Architect — **Sep 2025 – Present | Remote**

Core Stack: .NET 9, .NET 8, C#, CQRS, MediatR, EF Core, SQL Server, Cloudflare R2, Backblaze B2, Hangfire, QuestPDF, JWT Auth, PayMob

- Architected RESTful Web APIs for EdTech and consultation platforms (EduCore & Mashoorti) in .NET 9 using CQRS with MediatR, separating read and write workloads and indexing relational data to maintain responsive query performance during peak exam and enrollment periods.
- Engineered secure media streaming and voucher redemption engines; integrated private Cloudflare R2 and Backblaze B2 storage with 240-minute pre-signed token authorization and .NET 9 Device Lock security protocols to restrict direct server asset streaming.
- Built background job pipelines with Hangfire and dynamic PDF credential delivery engines using QuestPDF, streaming vector-rendered graduation certificates to cloud storage with retry policies and persistent execution state.

KEY PROJECTS

Flexfolio – Multi-Tenant SaaS Portfolio Builder | ***Full-Stack: .NET 9, Angular 21, SSR, Tailwind, Hangfire*** — [Live Demo]

Technologies: .NET 9, Angular 21, Angular SSR, Tailwind CSS v4, Hangfire, EF Core 9, SQL Server, OAuth2, jsPDF, UAParser, MailKit

- Architected a multi-tenant portfolio creation engine in .NET 9 with MediatR CQRS, EF Core 9, and UAParser telemetry; integrated multi-provider OAuth2 (Google, Facebook, Microsoft) and Hangfire background jobs for scheduled processing.
- Engineered an Angular 21 standalone client leveraging Server-Side Rendering (SSR), Tailwind CSS v4, dynamic reactive forms, and jsPDF integration to render client-side resume previews and vector PDF downloads.
- Implemented ASP.NET Core Identity lockout policies, automated orphan media cleanup schedules, and OWASP-hardened security headers.

Acacia – Luxury Perfume Formulation & ERP System | ***Full-Stack: .NET 9, Angular 21, Tailwind, Backblaze B2*** — [Live Demo]

Technologies: .NET 9, Angular 21, Tailwind CSS v4, Backblaze B2 (S3), MediatR, EF Core 9, SQL Server, AutoMapper, FluentValidation, xUnit

- Architected a chemical scent formulation and inventory engine in .NET 9 modeling recipe composition, batch unit costs, and TPH product SKUs with EF Core 9; integrated Backblaze B2 S3 storage with zero egress fees for cloud asset management.
- Engineered an Angular 21 enterprise SPA featuring a Signal-based reactive AuthStore, Tailwind CSS v4 design tokens, radar scent visualizer charts, and debounced formulation calculation forms.
- Implemented JWT authentication, anti-enumeration protections, and transactional Unit of Work pipelines to ensure consistent recipe formulation calculations.

Movies Platform – Cinema Catalog & Community Ratings App | ***Full-Stack: .NET 8, Angular 20, PostgreSQL, Dapper*** — [Live Demo]

Technologies: .NET 8, Angular 20, Minimal APIs, Dapper, PostgreSQL, Angular Signals, TypeScript, SCSS, PBKDF2 Hashing, JWT Bearer, Docker

- Engineered .NET 8 Minimal APIs backed by Dapper micro-ORM and PostgreSQL, writing parameterized SQL queries for catalog filtering, sorting, and server-side pagination.
- Implemented cryptographic PBKDF2 password hashing (100,000 iterations, SHA-256) with constant-time equality checks and automated database initialization via DbInitializer to mitigate timing attacks.
- Architected an Angular 20 standalone client featuring reactive Signal stores (MoviesStore), modular UI components (movie cards, filters, trailer modals), auth route guards, and HTTP interceptors handling JWT auth and global error handling.

MeritHR – Enterprise HR & Automated Payroll Platform | ***Backend Architecture: .NET 9, Quartz.NET, Redis, ClosedXML***

Technologies: .NET 9, Clean Architecture, Quartz.NET, StackExchange.Redis, ClosedXML, EF Core 9, SQL Server, ASP.NET Core Identity, Serilog, Seq, Docker

- Engineered an automated enterprise payroll calculation and cron scheduling engine using Quartz.NET, orchestrating monthly payroll runs, disciplinary deductions, and overtime adjustments with strict calculation consistency across pay cycles.
- Built a high-volume Excel reporting subsystem streaming organization-wide attendance and credit balance audits via ClosedXML and optimized EF Core projection queries, optimizing report generation and export streaming.
- Hardened enterprise identity infrastructure implementing sliding-expiration JWTs with Cryptographic SHA-256 Refresh Token Family Rotation and Redis distributed caching for instant token revocation.

Galaxy Backend – Enterprise Pharmaceutical Distribution System | ***Backend Architecture: .NET 9, DDD, NetArchTest, Redis***
Technologies: .NET 9, Clean Architecture, DDD, MediatR, Asp.Versioning, StackExchange.Redis, EF Core 9, SQL Server, NetArchTest, Serilog, Seq, Docker
- Architected an enterprise pharmaceutical distribution backend enforcing Domain-Driven Design (DDD) layer boundaries via automated NetArchTest test suites to prevent cross-layer architectural coupling.
- Implemented distributed caching and request idempotency using StackExchange.Redis and MediatR pipeline behaviors to minimize redundant database reads on inventory orders.
- Engineered medical representative visit tracking and delivery batch management subsystems with Asp.Versioning, Serilog structured logging into Seq, and real-time HealthChecks UI monitoring.

EduCore – EdTech Examination & Assessment Platform | ***Backend Architecture: .NET 9, Clean Architecture, CQRS, Backblaze B2***
Technologies: .NET 9, Clean Architecture, CQRS, MediatR, Backblaze B2 (S3), EF Core 9, SQL Server, FluentValidation, xUnit
- Architected an EdTech examination and lecture delivery API in .NET 9 utilizing Clean Architecture, MediatR CQRS, and FluentValidation pipeline behaviors to decouple business operations.
- Integrated Backblaze B2 cloud storage via S3 API protocols with 240-minute pre-signed URL token expiration, delivering protected lecture video and document asset streaming without direct server media egress.
- Built automated student assessment and quiz scoring pipelines with prepaid voucher card wallet redemptions, ensuring atomic credit balance increments and order processing via EF Core 9.

Mashoorti – Professional Consultation & Course Delivery Platform | ***Backend Architecture: .NET 9, QuestPDF, CQRS, MediatR***
Technologies: .NET 9, Clean Architecture, CQRS, MediatR, QuestPDF, EF Core 9, SQL Server, JWT Auth, Docker
- Engineered a consultation and course delivery platform in .NET 9 featuring CQRS with MediatR, student progress milestone tracking, and lecture video access gating.
- Implemented an automated vector PDF certificate generation engine using QuestPDF, streaming verifiable graduation credentials directly upon course and quiz completion.
- Hardened platform security incorporating multi-device session management, JWT token invalidation upon concurrent logins, and payment gateway integration.

QuickCart-MVC (Flyleaf) – Full-Stack E-Commerce Bookstore | ***Full-Stack: .NET 8, ASP.NET Core MVC, Bootstrap 5.3, Stripe*** [Live Demo]
Technologies: .NET 8, ASP.NET Core MVC, Razor Pages, Bootstrap 5.3, EF Core 8, SQL Server, Stripe.net, Backblaze B2 (S3), OAuth (Google & Facebook), xUnit, Docker
- Architected an enterprise literary e-commerce platform in ASP.NET Core 8 with Repository & Unit of Work patterns, processing credit card transactions via Stripe Hosted Checkout and webhook verification.
- Hardened security posture incorporating claim-based BOLA/IDOR protection, 5 failed login attempt lockouts, anti-CSRF token verification, and automated Backblaze B2 S3 product asset uploads.
- Designed responsive full-stack ASP.NET Core Razor views styled with Bootstrap 5.3 and custom design tokens (tokens.css), integrating client-side DataTables with AJAX, SweetAlert2 modals, and Toastr alerts.

GameIt – Digital Gaming Commerce & Distribution Platform | ***Full-Stack: .NET 8, Blazor WebAssembly, MediatR, Stripe*** [Live Demo]
Technologies: .NET 8, Blazor WebAssembly, Clean Architecture, MediatR, CQRS, Stripe.net, Hangfire, EF Core, SQL Server, JWT Bearer, xUnit
- Architected a gaming commerce and digital distribution REST API using .NET 8 and Clean Architecture, separating query and command execution via MediatR (CQRS) and AutoMapper to handle concurrent transactions.
- Integrated Stripe payment gateway and asynchronous webhook processing with EF Core database transactions, ensuring atomic license provisioning and order fulfillment upon payment validation.
- Built an interactive Blazor WebAssembly client with reusable Razor components for catalog browsing, cart operations, checkout flows, and role-based administrative management.

EDUCATION

Bachelor of Science in Computer Science — Future Academy – Higher Future Institute for Specialized Technological Studies **Sep 2019 – Jul 2023 | Cairo, Egypt**
Academic Honors: GPA: 3.79 (Excellent) | Graduation Project Grade: A+
